Project Report

- **Dr. JAGADEESH KAKARLA**

Team - 10

TEAM MEMBERS:

Y. Nihal - COE19B021

V. S. Jyothish - COE19B025

G. Paul Prince - COE19B026

K. Ram Mohan - COE19B055

Cisco Packet tracer:

It is a tool to develop the virtual simulation of any kind of topology or network working. It helps us to actually configure the routers, switches and all other network devices using CLI (Command line interface).

What is VLAN:

VLAN helps in limiting the access in a network to specified users by dividing the network into isolated segments. This creates a feeling that the users are in separate network even though they are present in same network.

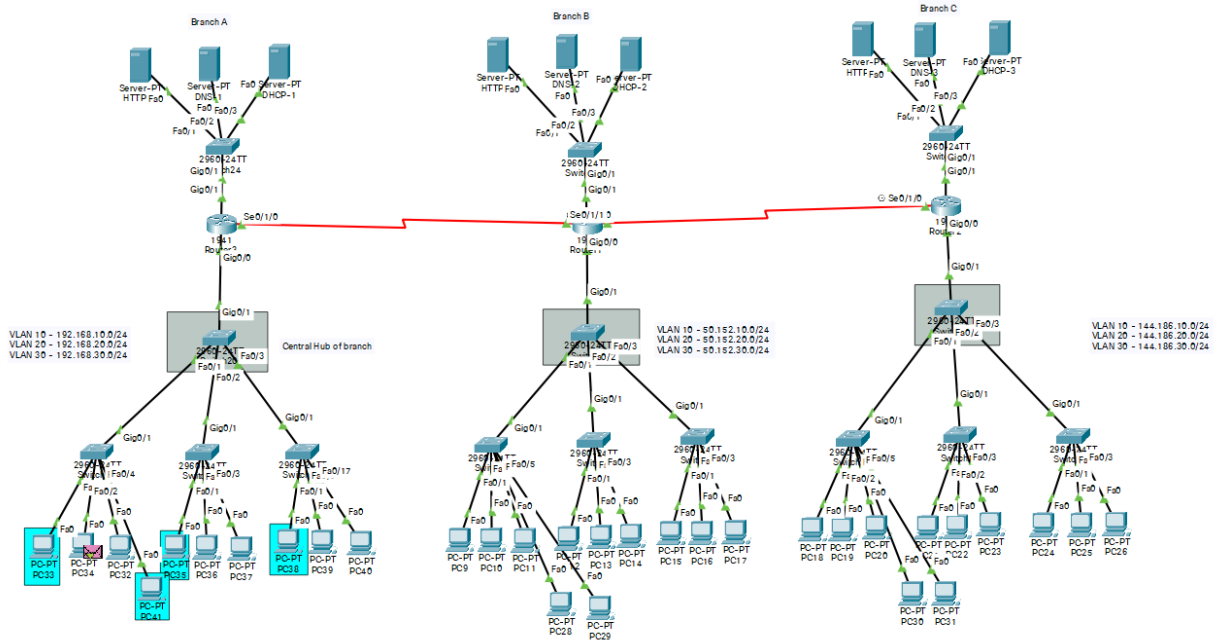

VLANs allow network administrators to group hosts together even if the hosts are not directly connected to the same network switch. (That's how we designed topology).

Problem Description:

- Building A Topology for a company(organization) with 3 branches and each having 3 departments.
- The departments may or may not present under same network switch, so we will be using INTER VLAN routing under IEEE 802.1Q encapsulation method.
- We will provide DHCP server for allotting IP address to the newly placed end-devices in the network. And we will provide an internal DNS server for demonstrating that a local website used within a company cannot be accessed outside the network.

Topology Design:

We will be having 3 VLANs in a network namely with Ids x.x.10.0, x.x.20.0 and x.x.30.0(for simplicity).

VLAN Table:

VLAN TABLE

NETWORK 1

VLAN ID	VLAN NAME	NETWORK ADDRESS	PORT ASSIGNMENT
10	Dept1	192.168.10.0/24	FA0/1-S1, FA0/1-S2, FA0/1-8-S3
20	Dept2	192.168.20.0/24	FA0/2-S1, FA0/2-S2, FA0/9-16-S3
30	Dept3	192.168.30.0/24	FA0/1-S1, FA0/1-S2, FA0/17-24-S3

NETWORK 2

VLAN ID	VLAN NAME	NETWORK ADDRESS	PORT ASSIGNMENT
10	Dept1	50.152.10.0/24	FA0/1-S1, FA0/1-S2, FA0/1-S3
20	Dept2	50.152.20.0/24	FA0/2-S1, FA0/2-S2, FA0/2-S3
30	Dept3	50.152.30.0/24	FA0/1-S1, FA0/1-S2, FA0/1-S3

NETWORK 3

VLAN ID	VLAN NAME	NETWORK ADDRESS	PORT ASSIGNMENT
10	Dept1	144.186.10.0/24	FA0/1-S1, FA0/1-S2, FA0/1-S3
20	Dept2	144.186.20.0/24	FA0/2-S1, FA0/2-S2, FA0/2-S3
30	Dept3	144.186.30.0/24	FA0/1-S1, FA0/1-S2, FA0/1-S3

IP Addresses:

Network 1

DEVICE	INTERFACE	IP	SM	DG
DHCP	NIC	192.168.100.220	255.255.255.0	192.168.100.193
HTTP	NIC	192.168.100.221	255.255.255.0	192.168.100.193

DHCP Table of Network 1:

Pool Name	Default Gateway	DNS Server	Start IP Address	Subnet Mask	Max User	TFTP Server	WLC Address
Network3	192.168.30.1	192.168.100.222	192.168.30.15	255.255.255.0	241	0.0.0.0	0.0.0.0
Network2	192.168.20.1	192.168.100.222	192.168.20.15	255.255.255.0	241	0.0.0.0	0.0.0.0
serverPool	192.168.10.1	192.168.100.222	192.168.10.15	255.255.255.0	241	0.0.0.0	0.0.0.0

In the similar way the remaining two branches are done.

Concepts we learnt:

1. Building a network
2. Concept of Sub-netting
3. Necessity of VLAN
4. Configuration of router, switches
5. Connecting two networks with routers

Conclusions/Advantages:

This network arrangement can be used for many organizations, not restricted to one kind of company.
